What this website should become

A premium architecture/interiors website where 3D interaction supports the work - without hiding indexable content from search engines.

1. **Brand position**

   Studio Nirmiti presents architecture, interiors, exteriors, execution, visualization and supervision as one connected design journey.

2. **Audience**

   Residential homeowners, commercial decision makers and hospitality clients looking for design, visualization and execution support.

3. **Experience**

   Aesthetic architectural 3D - layered planes, material cards, pointer/touch response, smooth scene transitions and editorial whitespace. Not neon/gaming UI.

4. **SEO**

   Every meaningful service and project intent gets a clean descriptive URL, real HTML content, metadata, internal links, structured data where appropriate, sitemap and Search Console readiness.

5. **Admin**

   A secure visual editing dashboard lets the owner edit text, images, projects, pages, SEO fields and section order/variants without changing code.

DESIGN VISION

Aesthetic 3D, not visual noise

The website should feel spatial and tactile: architecture diagrams, floating surfaces, depth and motion that reinforce the studio's design work.

Layered space

Use stacked cards, inset frames, floor-plan linework and soft depth shadows. Keep copy readable on quiet surfaces.

Pointer / touch response

Desktop pointer creates small perspective shifts. Mobile finger movement may move highlights or parallax layers - never require hover to access content.

Scroll choreography

Sections reveal in sequence; one key animation per viewport rather than every object moving simultaneously.

Real project media

Renders, drawings, walkthroughs and photos should be client-owned or licensed. Use placeholders until assets are supplied.

Performance budget

3D should be progressive enhancement. Lazy-load heavy canvases, cap device pixel ratio and provide static fallbacks.

Reduced motion

Honor prefers-reduced-motion and keep all information available without animation.

SEO FOUNDATION

Search-first architecture rules

The visual experience must never replace crawlable content. SEO is built into routing, content, performance and internal linking from day one.

Clean URLs

Lowercase, descriptive slugs with hyphens; avoid unnecessary parameters and duplicate routes.

One clear intent per page

Each service/category page targets a distinct user question and links to related pages instead of duplicating thin content.

HTML-first content

Primary headings, body copy, links and CTAs remain semantic HTML even when 3D scenes are present.

Metadata

Unique title, description, canonical, Open Graph and social image per page; editable in admin.

Structured data

Organization/LocalBusiness on key business pages, BreadcrumbList sitewide, Service/Collection/Article types when relevant.

Images & video

Descriptive filenames/alt text, responsive sizing, width/height, lazy loading below fold and video posters.

Technical

Fast mobile rendering, accessible navigation, XML sitemap, robots.txt, canonical handling, redirects and 404 page.

Measurement

Search Console, analytics/consent as required, lead event tracking, sitemap submission and URL inspection after launch.

Public site map

46 planned public routes grouped into service, project, room/sector and editorial clusters. Dynamic case studies and articles can expand beyond these core routes.

Core	Home, About, Contact, Portfolio, How We Work, Why Studio Nirmiti, FAQ, Consultation
Primary Services	Architecture, Interior, Exterior, Execution, Space Planning, Modular Kitchens, Furniture, Custom Furniture, 3D, Walkthroughs, Supervision, Turnkey, Renovation, Lighting/Ceiling, Materials, Wardrobes
Residential	Residential hub, Apartment, Villa, Living, Bedroom, Dining, Home Office/Study, Pooja
Commercial	Commercial hub, Office, Retail/Showroom, Restaurant/Cafe
Hospitality	Hospitality hub, Hotel, Resort
Exterior	Facade & Exterior Architecture
Editorial	Insights, Architecture Insights, Interior Insights, 3D Visualization Insights
Legal	Privacy Policy, Terms of Use

Navigation, footer & conversion system

A consistent global shell gives users clear movement while keeping SEO internal linking strong.

Desktop navigation

Logo left; Services mega-menu; Projects mega-menu; About; Insights; Contact; “Start a Project” CTA. Sticky only after first scroll, with compact state.

Mobile navigation

Full-screen or drawer menu with large tap targets, accordion service clusters and persistent WhatsApp/contact shortcut.

Mega menu

Primary services + project types + featured project. All items are real anchor links - not JS-only controls.

Footer

Services, project categories, About/Process, Contact, social links, phone, legal pages and city/service-area details once verified.

Breadcrumbs

Visible breadcrumbs on inner pages. Home page does not need visible breadcrumb.

Lead system

Primary CTA routes to /book-consultation; secondary CTA can open WhatsApp using verified number. Forms save to admin leads dashboard.

PAGE BLUEPRINT

Home

SEO URL: / • Primary intent: Brand discovery + lead generation

/

HOME PAGE: HERO ALLOWED

SEO TITLE Studio Nirmiti | Architecture, Interiors & 3D Design

1 Hero (ONLY hero on the website)

Full-viewport architectural scene introducing Studio Nirmiti, services and a clear “Start a Project” CTA. Use a lightweight 3D room/facade composition with copy rendered as real HTML.

3D / UX

Pointer/touch moves camera 2-4 degrees; scroll reveals next section; reduced-motion fallback.

2 Capabilities orbit

Interiors, Exteriors, Architectural Designing, Execution, Space Planning, 3D Visualization and Walkthroughs shown as floating material cards.

3D / UX

Cards tilt gently on pointer; swipe horizontally on mobile.

3 Project type switcher

Residential, Commercial and Hospitality tabs with representative project cards and quick proof points.

3D / UX

Crossfade/slide content, preserve accessibility and keyboard focus.

4 Before / after design layer

Concept sketch or wireframe versus final visual using draggable reveal.

3D / UX

Drag/slide reveal; touch friendly.

5 Selected work gallery

Editorial grid of 6-8 case studies with project type, location, scope and image.

3D / UX

Hover lifts frame, reveals role/scope; tap opens case study.

6 Process ribbon

Brief -> Planning -> 3D -> Material -> Execution -> Supervision -> Handover.

3D / UX

Scroll-progress line animates once.

7 Why Studio Nirmiti

Four compact trust cards: tailored planning, visualization-first, coordinated execution, transparent supervision.

3D / UX

Depth shadow and numeric counters only if real data exists.

8 Consultation CTA

Short lead form + phone/WhatsApp, project type and approximate area.

3D / UX

No autoplay effects; reassuring micro-animation.

ADMIN All copy, media, card order, visibility, CTA, metadata and section variants editable.

SCHEMA / LINKS Organization + LocalBusiness + WebSite + BreadcrumbList • All service hubs, project categories, About, Contact

Global 3D & motion language

Use depth to explain design, not to decorate everything.

Pointer tilt

Interactive cards: max 4-6° tilt, 8-14px translation, spring return. Disable on coarse pointers when it adds no value.

Scene parallax

Background architectural planes move slower than foreground copy; content remains stable/readable.

Scroll reveal

Opacity + translate + small perspective; stagger only 40-80ms between siblings.

Touch response

Finger movement can shift highlights or orbit a scene; scrolling always wins vertical gesture priority.

3D canvas rules

Only load on pages that need it. Dynamic import, static poster, capped DPR, pause offscreen.

Motion accessibility

prefers-reduced-motion: remove camera drift, large parallax and auto motion while retaining state changes.

Responsive experience rules

The mobile version is not a reduced desktop scene; it gets its own interaction priorities.

Breakpoints

Design content first; test small phones, large phones, tablets, laptops and wide desktop.

Navigation

No hover dependency. Mega-menu becomes accordion/drawer.

Typography

Fluid clamp sizes, readable line length, no text over canvas without contrast layer.

3D simplification

Reduce geometry, particles and post-processing on smaller/low-power devices.

Galleries

Swipeable with visible controls and accessible buttons.

Admin preview

Visual editor must switch desktop/tablet/mobile preview widths.

Technical SEO implementation

SEO must be generated from the same CMS content used by the page.

Metadata model

seoTitle, metaDescription, canonical, ogTitle, ogDescription, ogImage, indexable flag.

Routing

Stable lowercase slugs; hyphens between words; redirects when slug changes.

Sitemap

Generate XML sitemap for public indexable routes and dynamic projects/articles.

Robots

Allow public content; block /admin and private API routes.

Canonical

Self-canonical pages unless there is a deliberate duplicate consolidation case.

Search Console

Verify domain, submit sitemap, inspect representative service/project URLs after deployment.

Structured data & internal linking

Markup should describe visible page content and verified business details.

Organization / LocalBusiness

Use verified name, phone, URL, logo, address/service area when supplied. Do not invent ratings.

BreadcrumbList

Use route hierarchy on inner pages.

Service

Use Service schema where it accurately represents a service page.

Collection / Article

Project grids and editorial hubs use appropriate collection/article markup.

Internal links

Every service links to project examples, related services and consultation.

Validation

Run Rich Results Test / schema validation and fix errors before launch.

Admin dashboard architecture

A secure CMS plus visual page editor - not code editing.

Authentication

/admin/login with secure auth; owner/admin role required.

Dashboard

Overview of pages, projects, enquiries, media and recently changed items.

Content collections

Pages, sections, services, projects, articles, testimonials if supplied, FAQs, navigation and site settings.

Draft/publish

Editing creates draft. Preview before publish. Store updatedBy / updatedAt.

Version history

Keep revisions for copy/layout changes and allow rollback.

Audit trail

Log publish, delete, slug change and role changes.

No-code visual editor

The owner should click the page, select a section and edit without touching source code.

Live preview canvas

Render the real component tree in an editor preview; selected section gets an outline.

Inline text edit

Click heading/body/button text and edit in a side panel or safe inline field.

Media replacement

Select image/video, choose from media library, crop/focal point, alt text.

Layout variants

Switch controlled variants: full-width, split, grid, gallery, media-left/right, card count and alignment.

Reorder / duplicate

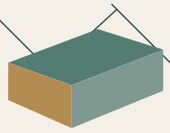

Drag sections, duplicate, hide, restore and delete with confirmation.

Design tokens

Allow safe spacing, theme background, accent and section density options - not arbitrary CSS that can break responsive design.

Media, SEO, leads & permissions

Everything required for long-term ownership belongs in one system.

Media library

Folders/tags, alt text, focal point, dimensions, usage references and delete protection.

SEO manager

Page titles, descriptions, canonical, OG image, slug/redirect, indexability and sitemap status.

Projects CMS

Project title, category, services, location, summary, gallery, before/after, video, related projects.

Lead inbox

Store consultation form enquiries with status, notes and export.

Navigation manager

Reorder menus and footer links from predefined safe destinations.

Users

Owner/admin/editor roles; editors cannot manage user permissions or critical deployment settings.

Launch checklist + research references

Final verification before the client sees the site.

QA

No console errors, broken links, overflow, layout shifts, unreadable overlays or empty sections.

Performance

Test mobile Core Web Vitals, lazy loading and 3D fallbacks.

SEO

Titles/descriptions, canonicals, sitemap, robots, redirects, structured data, alt text and internal links.

Security

Admin auth/rules, upload validation, rate limits on public forms, secrets only server-side.

Client handover

Admin guide, credentials ownership, backup/export process and change workflow.

Research basis

Google Search Central URL Structure, SEO Starter Guide, Organization/LocalBusiness structured data; service taxonomy cross-checked against Hyderabad/India architecture and interiors studios including III Studio, Inarc, Space & Scale, Culture Concept and other current service pages.
